

Sachin Pal

Ahmedabad, Gujarat - 380001

(+91) 90231 54545 · sachinpalsp917@gmail.com · linkedin.com/in/[your-handle] · github.com/[your-handle]

Technical Skills

Languages: JavaScript, TypeScript, SQL, HTML5, CSS3 (Learning: Go — goroutines, channels, packages, file I/O)
Frameworks/Libraries: React, Next.js, Node.js, Express.js, Redux, TanStack Query, Prisma ORM, ShadCN, Tailwind CSS
Tools & Technologies: Git, GitHub Actions, Docker, GHCR, AWS (EC2, S3, IAM), TrueNAS, Redis, PostgreSQL, MongoDB, OAuth 2.0 / JWT, Postman

Education

Indus University [Year] – [Year]
Bachelor of Engineering, Computer Science — CGPA: 9.4 / 10 — GATE 2025 Qualified (CS) Ahmedabad, Gujarat

Experience

Corp8AI Aug 2025 – Present
Full-Stack Developer (early-stage AI startup, AI-products arm of Uminber) Ahmedabad, Gujarat

- Shipped **Shodh** end-to-end — engaging directly with enterprise pilot customers to scope features, then integrating **4 third-party OAuth 2.0 gateways** (Microsoft Teams, Slack, Jira, ERP) with refresh-token rotation over webhooks and polling, surfacing unified cross-tool dashboards and daily LLM-generated insight summaries.
- Cut repeat-query latency by **~60%** [estimate, verify before sending] and reduced LLM token spend on duplicate prompts by **~40%** [estimate, verify before sending] by designing a per-tenant Redis caching layer over hot dashboard queries and model state with TTLs of 300–1000s.
- Designed and operated Shodh's **CI/CD pipeline** in GitHub Actions — runs lint + tests on push, builds Docker images to GHCR, deploys to a self-hosted bare-metal staging box (i9 / 128GB RAM / GPU on TrueNAS) for QA, then main-branch merges promote to AWS production (EC2, IAM service roles, S3) backed by PostgreSQL.
- Shipped **Nyxo** end-to-end (private beta) — owned the full Next.js + TypeScript + Prisma + PostgreSQL stack: site builder, content schemas, storefront, product/service/course modules, and the publishing + payout admin.

Effectual Media Jun 2024 – Apr 2025
Full-Stack Developer Ahmedabad, Gujarat

- Decomposed a monolithic Node.js/Express service into **3 Dockerized microservices** (auth, upload, processing), cutting average deploy time from **~25 min to ~10 min** and unlocking per-service independent deploys.
- Built React + Redux + TypeScript interfaces for the core product and partnered with design to streamline onboarding from **7 steps to 3**, lifting flow-completion by **~30%** [estimate, verify before sending].
- Refactored slow PostgreSQL queries with composite indexes and Prisma-join rewrites for N+1 patterns, cutting one critical page's average load from **~3s to ~800ms** (~73% faster).

Effectual Media Mar 2024 – May 2024
Full-Stack Developer Intern Ahmedabad, Gujarat

- Shipped REST API endpoints in Node.js + Express for the v1 product launch (auth + payments) and resolved React.js UI defects across the bug tracker, contributing to a **15% sprint-over-sprint reduction** in reported UI bugs.

Projects

AuthHub | TypeScript, Hono, Next.js 15, Drizzle, PostgreSQL, Docker, Turborepo *github.com/[handle]/authhub*

- Built **authhub**, a self-hosted multi-tenant auth microservice (Hono API + Next.js 15 dashboard + published SDK) supporting email/password, magic links, email/SMS OTP, social (Google, GitHub), TOTP MFA, **WebAuthn passkeys**, and OAuth 2.1 with PKCE-S256.
- Implemented production-grade security primitives — per-app **EdDSA (Ed25519) JWT signing** with envelope-encrypted private keys at rest, atomic refresh-token rotation, Argon2id with constant-time user-not-found, HMAC-SHA256 webhook signing, and Postgres-backed rate limiting; hardened against a **17-attack pentest** before v1.
